AIR RIPPLE MATTRESS COMPLETE WITH PUMP

DESCRIPTION

Ripple Mattress is ideal for prevention and treatment of patients at low risk of pressure ulcers. This light weight and compact alternating pressure pad is composed of bubble cells, and it is used as an alternative to heavier products such as gel overlay mattresses.

A ripple mattress is essential when caring for people who are confined to the bed for extended periods of time.

A typical night's sleep on usual mattresses will increase the risks of developing pressure ulcers on bed bound patients.

Connected to a power unit, this bubble-type ripple mattress provides alternate filling and emptying of its air chambers to support the body while evenly distributing pressure spots for weak patients who cannot shift their weight frequently.

Minimal degree of pressure points directly correlate to user comfort and prevent skin problems that can deteriorate and develop into painful and fatal pressure ulcers.

Designed with exceptional durability in mind, each air bubble call is heat sealed to ensure it will not leak.

FEATURES

- Pressure ulcer prevention
- Easy to use adjustment settings
- Low flame retardant level and medical grade bubble pad
- Hangers suitable for most bed types
- Alternating Pressure Redistribution System for comfort and ventilation
- Low noise to ensure good quality sleep
